Step by step: Install extension

Posted on 04/11/201810/12/2018 by deadbuck

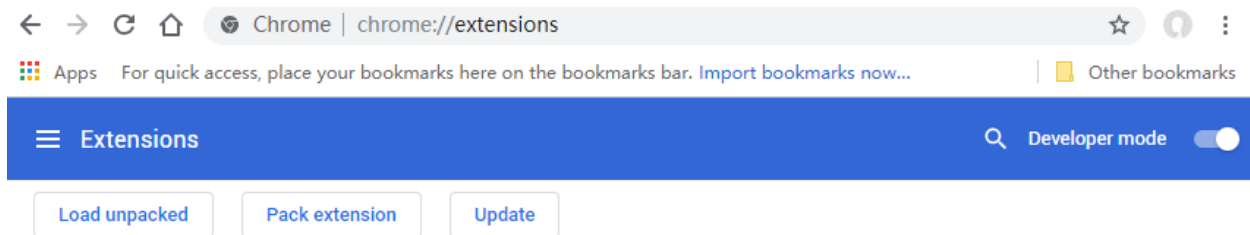

You can install a google chrome extension from google chrome web store (<https://chrome.google.com/webstore/search/chrove>).

Some user can not visit google chrome web store, you can download an offline package from https://github.com/0xbluemoon/chrove_chrome_extension (https://github.com/0xbluemoon/chrove_chrome_extension).

Extract to a local new folder like chrove_ext.

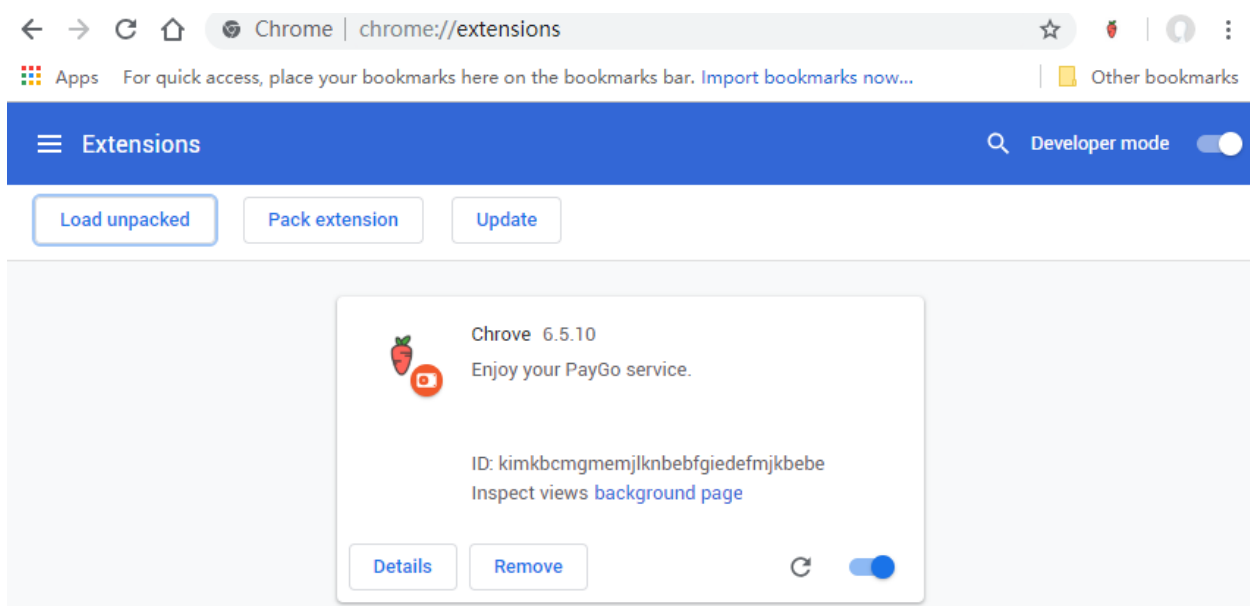

Then open google chrome and input chrome://extensions/ in url and press enter key.

you need to open the developer mode by open the top right button.

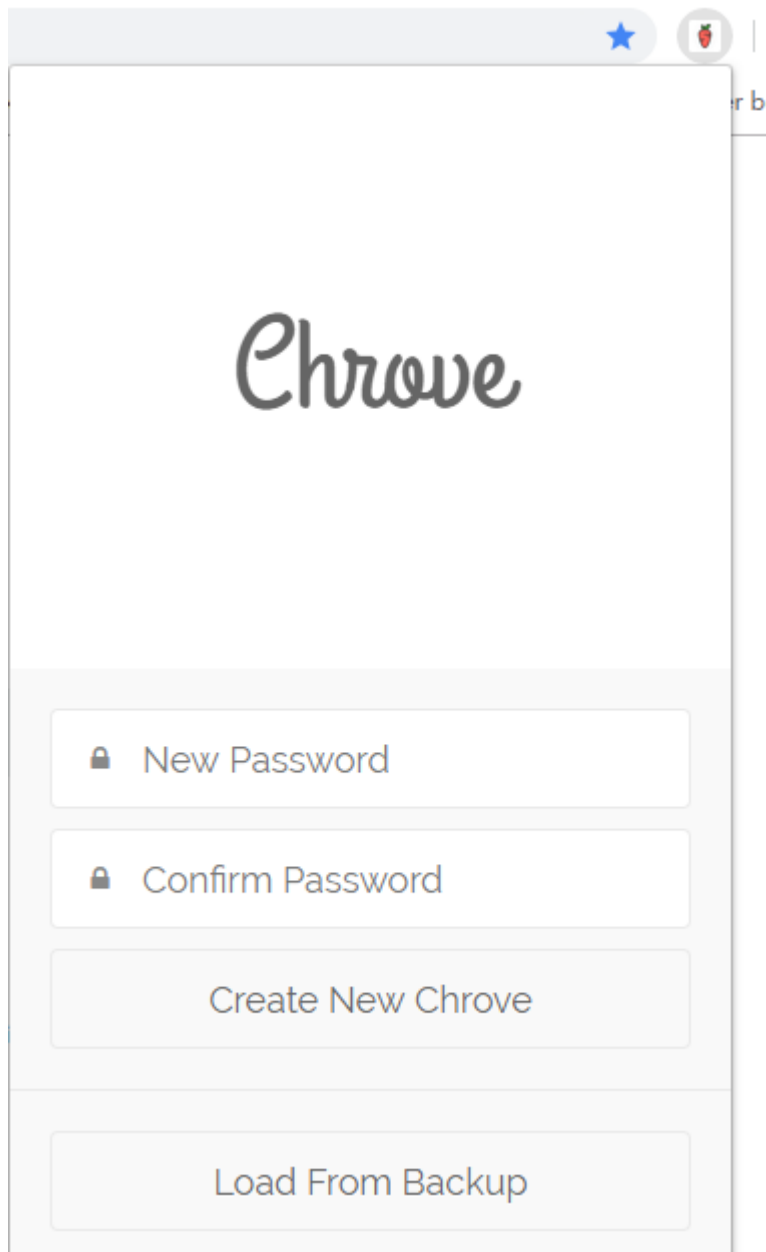

And then click the load unpacked, select the folder chrove_ext.

The extension is loaded

And you can see the carrot icon on Google chrome tool bar.

Open it, you need to create a password to protect Chrove because it is a cryptocurrency wallet.

Chrove

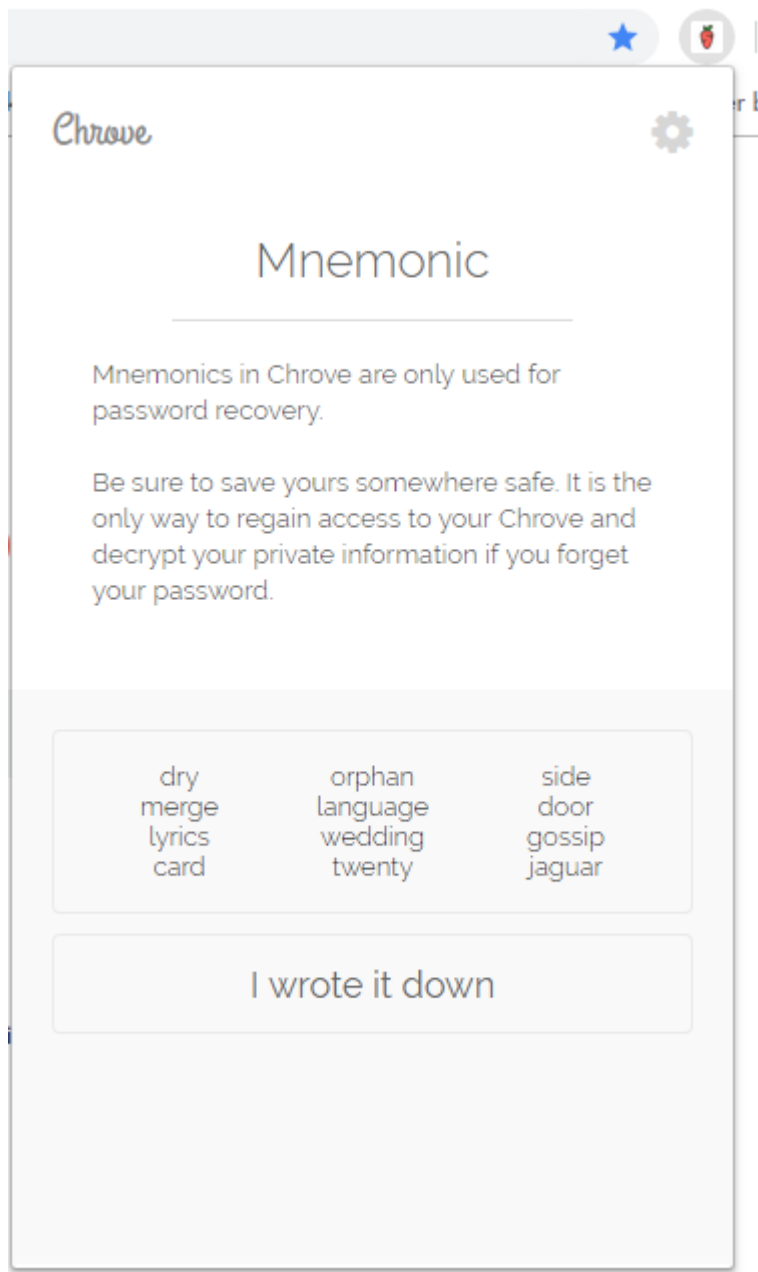

New Password

Confirm Password

Create New Chrove

Load From Backup

Then you need to backup some text.

The installation is done after you write the password down.

We will show you how to order in next [chapter](#)
